## **GAMMA** Chair design R&S PIANCA

---

GAMMA was conceived out of the desire to create a very varied and customizable product range that comprehensively embodies the Pianca philosophy.

Its chameleon-like design reveals a multi-faceted character commissioned to provide an original response to the need for furnishing contemporary everyday living spaces.

Its style is modern and sophisticated.

The chair is the signature element of GAMMA. Its shape resembles a cross-section of an egg and was conceived for comfort and cocooning, whether in the lacquered rigid version or the upholstered leather or removable fabric cover version.

The base is the element that changes. It is available in five variants: four painted metal legs, metal trellis, aluminium swivel base, four solid wood legs, or the new cross structure.

This last solution is the result of new technology, which allows use of much more slender legs, with solid natural wood and covered aluminium core. The result is a stable chair, offering a combined powerful visual impact of the wooden base and upholstered seat, without losing the characteristic lightness of the other versions.
