

Trotter — design Rogier Martens, 2015

This mobile chair for children is made of steel rod and a rotation-moulded wheel. The conspicuous wheel is an invitation for children to be active, because it makes it easy to move the chair to the best spot, over and over again.

## Designer

**Rogier Martens**

Rogier Martens (1978) studied product design in the Netherlands and graduated in 2006, the same year he started his own design studio in Utrecht.

The studio specialises in product and outdoor design. Since 2013 the studio has focused on exhibition design. The studio is innovative in its fresh approach, combining distinct designs with the introduction of new technologies. They search for the smartest way to make complex questions understandable.

In 2010 he co-founded the design label 'Aandeboom', of which many products

are successfully sold on a national and international level.

Martens prefers objects and surroundings with an unmistakable identity. In his designs he actively seeks interaction with the user; to define the needs of the end user he always supports his designs with research. This open approach leads to special designs with great potential for use.
