Notes

Wood is a living material and, as such, can show small alterations in color and size. Iroko wood may therefore present not homogeneous shades of color, to be considered as a quality and not a defect. For the maintenance of Iroko kindly follow the instructions included in the maintenance kit supplied with the product.

Furthermore, especially after rain or during period of high humidity, it is recommended to periodically separate the different elements and / or to temporarily lift the seat / backrest / armrest cushions to allow a complete drying of the same and to avoid the accumulation of dirt and humidity that might cause mildew. To improve the life of the product, it is also recommended to protect it with the "Outdoor Covering"; remember that this covering is water vapour repellent and prevents mould and corrosion. It can be washed with water and soap.
