Forest Table

design Beatriz Sempere, 2017

Forest fixed table with base in lacquered metal, available in different sizes. Top in veneered, walnut solid or oak solid wood.

Colors and Materials

Structure

White steel

Black steel

Sand steel

Brown steel

Grafite metal

Industrial steel

Papaya orange steel

Light blue metal

Ocean blue steel

Bronze metal

Fango steel

Golden yellow metal

Pastel yellow steel

Ash grey metal

Light grey steel

Ocher steel

Facepowder pink metal

Red steel

Bulgaro red metal

Cherry red metal

Pine green steel

Sage green metal

Dark green metal

Coating

Solid oak straight edge

Solid walnut bark edge

Black lacquered veneered ash

White lacquered veneered ash

Veneered ash natural finish

Veneered flamed walnut

Natural oak veneered

Dimensions

Dark green metal

The technologies used in the previous phase of powder coating play a fundamental role in the final result of the processing. They are in fact essential to increase adherence paint on the metal surface and then guarantee its duration over time. The metal frames, following a total cleaning of the surface, pass through chemical conversion processes, creating a compact base that allows for better adhesion of the subsequent treatment. In the last phase the object subjected to the powder coating process is placed in a polymerization oven, going to form an adherent and extremely tight layer durable. This particular paint job is ideal for outdoor use.

To clean the surface, use a damp microfiber cloth with neutral soap or specific metal cleaning products. Avoid hitting or rubbing the surface with sharp objects. Do not use scourers or other abrasive materials, since they would inevitably scratch the surface. Do not leave rusty iron objects on the surface for too long.

These surface treatments are not suitable for outdoor use, but they guarantee excellent resistance to frequent use, dirt and dust.

Solid oak straight edge

FEATURES AND PLUS

Solid wood tops are obtained from the trunk of the tree, in particular from the heartwood, or the inner part (the less young one). Each top has unique characteristics in terms of veins and knots due to the natural origin of the material. To reach the widths necessary for the realization of a top for domestic use, several floorboards/strips are joined together in an effort to maintain the greater possible uniformity.

MAINTENANCE

For the regular cleaning schedule of Solid woos tops, use a wet sponge with mild soap diluted in water or specific products. Dry after each application with a cloth or absorbent paper. Do not use abrasive products. In case of accidental release of liquid substances, dab immediately the surface with absorbent paper or a dry, clean cloth. Avoid proximity to heat sources. Expose the solid wood surfaces to light, for example by opening periodically the extensions of the tables that are placed inside the structures, or by moving any objects such as vases and accessories generally resting on the top.

Materials Certifications

Black lacquered veneered ash

Veneered woods are the result of a process of gluing extremely thin sheets of wood applied to various types of supports to produce furnishing elements, which have a similar appearance to solid wood, but with better performance in terms of resistance to woodworms, lightness and greater stability over time.

If exposed to light, and in any case with the passage of time, the color of the veneer changes. It may happen that furniture of the same color purchased after some time, show color differences. Upon request, the veneered parts can be supplied with certified origin from forests managed in a correct and responsible manner, according to the rigorous environmental standards established by the FSC circuit.

CLEANING AND MAINTENANCE

For ordinary cleaning of veneered woods, use a cloth moistened with neutral soap well diluted in water or specific products. Always dry after each application with a dry cloth or paper towel. Do not use abrasive products. In case of accidental spills of substances or liquids, immediately dab the wood with paper towel or with a dry and clean cloth. Avoid proximity to heat sources. Evenly expose the veneered woods to light, for example by periodically opening the table extensions that are stored inside the structure, or by moving any object placed on the surface, such as vases and accessories.

These tips are cleaning recommendations and do not guarantee complete stain removal.

We recommend that you always test the cleaning method on a hidden part of the item to check the resistance of the color.

Colour samples are to be considered approximate for each product. Slight color differences between a lot and the other are to be considered normal.
