

Coral è una collezione di lampade realizzate in ABS e composte da un elemento modulare stampato ad iniezione dalla forma particolare che ricorda un ramo di corallo marino. L'idea dello studio Lagranja Design che ha dato vita a Coral è quella di una lampada visivamente ricca e articolata che parte da un elemento molto semplice e che si ripete sul principio che regola la crescita in natura dal semplice al complesso. Le lampade sono disponibili in più colori con inserti di 3 elementi colorati a contrasto. Tutte le versioni sono dotate di diffusore cilindrico in vetro. La struttura portante è in acciaio verniciato negli stessi colori dei rami.

Coral is a collection of ABS lamps consisting of a modular injection-moulded element with a distinctive shape that recalls a sea coral branch. The idea that led to the conception of Coral, designed by studio Lagranja Design, is that of a visually emphatic and elaborate lamp, which originates from a very simple element repeated according to the principle governing growth in nature, i.e. from simple to complex. The lamps are available in multiple colours with three inserts in contrasting colours. All versions are equipped with a cylindrical glass diffuser. The supporting frame is made out of steel, painted in the same colours as the branches.
